

OPC & Modbus client
 Customizable alarms
 SMS and email
 Data logger
 Alarm logger
 FREE licence (5 tags)

Do you need a solution for **ALARM** notification and management ?

Notify is an alarm notification software with advanced features.

Increase productivity, reduce response times, and interact with queries, writings, or actions.

Client for OPC (DA/UA), Modbus, Siemens...

Notify can interact with SCADA software, monitor systems, PLCs and other devices, since it has the most widely used standard protocols in the industry.

Easy and intuitive interface

Notify has been designed so that any novice user can install and set up the application in a simple and intuitive way, in a few minutes.

It centralizes the management of alarms, contacts, schedules... without displacements, only a couple of mouse clicks.

Own tags - Data transformation

Notify allows the definition of own tags, and can apply a transformation to original OPC tag value.

Tags and alerts can be classified in groups or folders according to user criteria.

Email / SMS support (alarms & queries)

You can notify alarms by email or SMS, via a local GSM modem or online SMS gateways (Twilio, Nexmo, ...)

OPC-DA Server

Variables, alarms, and configuration parameters are available through internal OPC-DA server, allowing integration with other systems.

Data logger (tags & alarms)

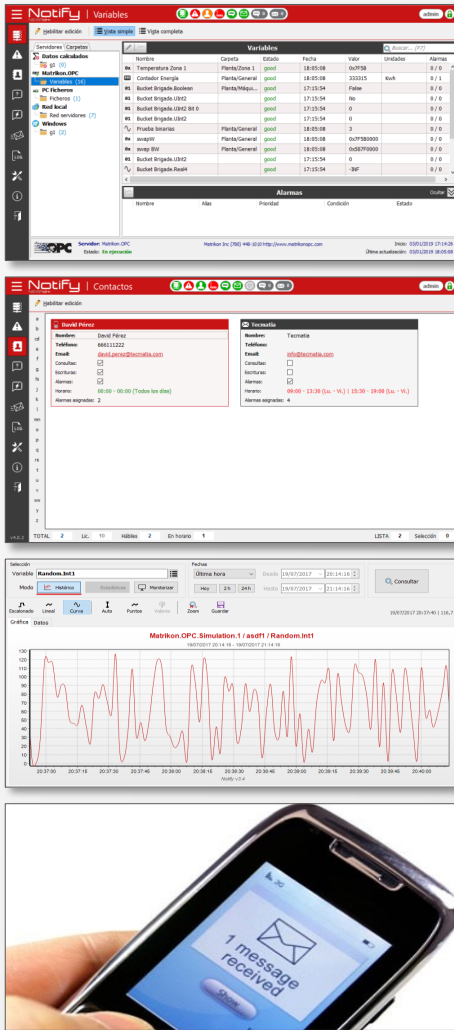

Notify allows data logging of tags and alarms in an internal or external database (RDBMS: Oracle, SQL Server, MySQL... or TSDB: InfluxDB)

You can query historical data on charts or tables, and export to CSV.

Remote control and user interaction

You can send queries, change values, and many more actions.

Main features:

- Read / Write data from one or more servers (OPC-DA, OPC-UA, Modbus TCP and RTU, Siemens S7, Operating System, Calculated data, ...)
- Easy and intuitive interface and settings.
- Declaration of own variables, being able to transform the original data with a multitude of available operations.
- Aggregated functions (sum, average, maximum, minimum...).
- Centralized address book, with flexible hours, holidays, and contact groups.
- Two-way SMS and email support, with customizable text for alarms.
- Supports any GSM modem with standard AT commands.
- Supports most online SMS gateways (Twilio, Nexmo, Esendex, Clickatell...)
- User interaction with queries, writings or action messages.
- Internal data logger, with charts and tables. Exportable to CSV.
- External data logger, to RDBMS or TSDB.
- Desktop popup messages on alarm activation.
- You can limit messages sent per day or month.
- Multi language support (English / Spanish).
- System alarms (data acquisition fail, and many more).
- Schedule periodical message with system state.
- OPC-DA server, which facilitates integration with other systems or allows Notify to be used as a gateway or protocol converter.
- Simple integration with InfluxDB and Grafana for web access.
- Scalable and modular licence, with free Support and updates for 1 year.
